

## Analysis of Investment Implementation in Shari'ah Insurance Company According to Fiqh Muamalah

**Kautsar Rizqi Safrizal**

Ar-Raniry State Islamic University Banda Aceh, Indonesia

Email: 160102148@student.ar-raniry.ac.id

### Abstract

The main objective of the investment portfolio is to get a high rate of return with a small level of risk to fulfil obligations both to policyholders and for company growth. While profitability describes the company's ability to earn profits through all existing capabilities and sources. Sunlife Syari'ah Insurance Company provides investment opportunities to customers through insurance products. In each product has a different contract. Worth the product that requires its customers to take investment and products that do not have investment in it, of course in investment has a contract that is different from the life insurance policy, because Sunlife Syari'ah Insurance products that contain elements of investment are still very new, it is necessary to explain in more detail about the contract and implementation of investment in insurance companies. The author uses research methods that include qualitative research methods, where this method is descriptive analysis. The National Shari'ah Council Fatwa No. 21/DSN-MUI/X/2001 concerning General Guidelines for Shari'ah Insurance states that what is meant by Shari'ah insurance (ta'min, takful or tadhamun) is an effort to protect and help each other among a number of people or parties through investment in the form of *tabarru'* fund assets that provide a pattern of return to face certain risks through contracts (agreements) in accordance with Shari'ah. Therefore, insurance is permissible in Shari'ah, because the basic principles of Shari'ah invite to everything that results in the bonding of fellow human beings and to something that alleviates their disasters as Allah Swt says in the Qur'an surah Al-Maidah verse 2.

**Keywords:** Fiqh Muamalah, Investment Shariah, and Insurance

## Introduction

In Shariah insurance, the source of claim payment is taken from the *tabarru'* fund account that has been intended by all Shariah insurance participants for helping activities. The process of filing a claim occurs when the insured party gets a disaster, accident or health problem that comes unexpectedly. If at the end of the period the amount of participant contributions is greater than claims and other expenses, there will be an *underwriting surplus*. The *underwriting surplus* is the excess of total participant contributions to the *Tabarru'* Fund after deducting compensation or claim payments, reinsurance contributions, and technical reserves, in a certain period.

Shari'ah insurance business has the principle of helping or protecting each other by setting aside funds as a benevolent contribution related to *tabarru'*. So this system is more about risk sharing where participants bear each other, so that existing funds must be managed properly. Insurance activity is a type of business that is included in the category of business activities that are highly regulated by the government. This is because insurance is closely related to the collection of funds from the public, namely in the form of fund contributions. However, financial performance is still important for the insurance company itself, because trust can be built from institutions whose financial performance is healthy, although this cannot be seen only from the financial statements. The basis of insurance is public trust, especially in terms of financial ability to fulfil claims and other obligations on time. For this reason, the insurance business must be managed professionally, both in risk management and financial management.

Investment is the investment of a certain amount of funds at this time to get greater results in the future. It can also be said that investment is a savings process that is oriented towards certain goals and how to achieve these goals. The principle in financing activities and financial investment in Sharia insurance is a variety of business ventures carried out by the owner of capital to the entrepreneur (issuer) aims to empower business owners to the maximum in carrying out their business activities where financiers and investors expect to get certain benefits or profits.

Investment is literally defined as an investment activity or activity, while an investor is a person or legal entity that has money to make an investment or investment. Investment activities are not a new thing in human civilisation, because since ancient times people have made various forms of investment. It's just that in ancient times people invested in the form of investments made directly such as: investment in the purchase of

livestock, purchase of agricultural land, or investment in making plantations and so on.

Investments in insurance companies can be recognised in the form of portfolios. According to Lawrence and Michael quoted by M. Syakir Sula, a portfolio is a collection of integrated investment forms that aim to get investment returns. The main objective of the investment portfolio is to get a high rate of return with a small level of risk to fulfil obligations both to policyholders and for company growth.<sup>1</sup> While profitability describes the company's ability to earn profits through all existing capabilities and sources.

Sunlife Syari'ah Insurance Company provides investment opportunities to customers through insurance products. Each product has a different contract. Worth the product that requires its customers to take investment and products that do not have investment in it, of course in investment has a contract that is different from the life insurance policy, because Sunlife Syari'ah Insurance products that contain elements of investment are still very new, it needs a more detailed explanation of the contract and implementation of investment in insurance companies.<sup>2</sup>

Thus the author wishes to raise the issue through a scientific work entitled: *"Analysis of Investment Implementation in Shari'ah Insurance Companies According to Fiqh Muamalah (A Study in Sunlife Shari'ah Insurance Banda Aceh)"*

## Research Methods

The author uses research methods that include qualitative research methods, where this method is descriptive analysis. Descriptive analysis is a method that aims to describe using data analysis, painting or describing systematically, which is concerned with the facts, properties and relationships between the phenomena being investigated. And also utilising existing theory as supporting material to produce a theory, in this study the author investigates investment analysts on Sharia insurance products. The data sources obtained to examine the object of study are primary and secondary data sources. Data collection techniques in this study are using interviews and documentation methods. Researchers in this case will design the subjects that will be used as research, and make supporting instruments of research. Then the data obtained will be

<sup>2</sup> Interview with the Head of Sunlife Syari'ah Insurance office Mr Safrizal on 09 November 2021

analysed and will produce a conclusion that is generally and easily understood.

## Results and Discussion

### A. Definition of Investment

Investment is a term with several meanings related to finance and economics. The term relates to the accumulation of some form of assets with the expectation of future gains. Sometimes, investment is also referred to as capital investment. Based on economic theory, investment means the purchase and production of capital goods that are not consumed but used for future production.<sup>3</sup> Investment is a commitment to a number of funds or other resources made at this time, with the aim of obtaining a number of future benefits. Meanwhile, according to Sunariyah, investment is the investment of capital for one or more assets that are owned and usually have a long term in the hope of getting future profits. Another opinion reveals that investment is the placement of the amount of funds at this time with the hope of obtaining future profits. Investment is also called postponement of current consumption to be used in efficient production over a certain period of time.

According to Jogiyanto, investment can be defined as a delay in current consumption to be used in efficient production during a certain period of time.<sup>4</sup> Meanwhile, according to Sukirno, investment activities carried out by the community will continuously increase economic activity and employment opportunities, increase national income and increase the level of community prosperity. This role comes from three important functions of investment activities, namely (1) investment is one component of aggregate expenditure, so that an increase in investment will increase aggregate demand, national income and employment opportunities; (2) the increase in capital goods as a result of investment will increase production capacity; (3) investment is always followed by technological developments.<sup>5</sup> From the definition above, it can be seen that investment is the placement of the current amount of funds in one or more assets owned in a certain period to obtain future profits.

## B. Investment Type

The term investment can relate to a wide range of activities. In investing, there are two types of assets: real assets and financial assets. Real assets are assets that have a form such as land, houses, gold, precious metals and others. Meanwhile, financial assets are assets that are invisible but still have high value such as bonds, stocks, mutual funds and money market instruments. For smarter and more risk-taking investors, their investment activities can also include investing in more complex financial assets such as warrants, options, and futures as well as international equities.

Investing is concerned with the management of financial assets, especially tradable securities. Financial assets are claims in the form of securities on a number of assets of the asset issuer of the securities. Marketable securities are financial assets that can be traded easily and at low transaction costs in an organised market.

Parties who make investments are referred to as investors. Generally, investors are divided into two groups, namely individual investors and institutional investors. Individual investors consist of individuals who carry out investment activities. Whereas institutional investors consist of companies of depository institutions such as banks and savings and loan institutions, then insurance companies, pension fund institutions and investment companies.

## C. Shari'a h Investment

Shariah investment is a Shariah-based investment that uses Islamic instruments in its implementation. There are several types of investments based on timeframe, risk and process. These things need to be known in order to ensure the accuracy between the reason and the way of investing.<sup>6</sup>

a. According to the time period

Short-term investments, which are investments made for no more than 12 months. Medium-term investments, which have a time span between 1 to 5 years. Long-term investments that have no time limit.

b. According to risk

Every investment choice will be related to two things, risk and return. Both are cause and effect relationships and contradictory relationships. In investment theory, the term "*high risk high return, low risk low return*" is known.

In Arabic, risk can be defined as gharar. Which sometimes also refers to *uncertainty*. If risk is then simply equated with uncertainty, and this

---

<sup>6</sup> Ganjar Isnawan, *Smart Strategy for Shari'ah Investment*, Laskar Aksara, Jakarta, 2015, p 45.

uncertainty is considered gharar and prohibited, it will become complicated. Therefore, it is important to differentiate and sharpen the definition of gharar or risk.<sup>7</sup>

There are two things that distinguish risk into two types. The first is passive risk, such as a *game of chance*, which relies solely on luck. The second is responsive risk, which allows for a probability distribution of outcomes with logical causality.

Uncertainty is intrinsic to every economic activity. However, the uncertainty of the event still follows a logical causality that can affect its probability. This means that seeking profit by luck alone, such as buying a lottery, gives rise to delusions or false expectations, and is definitely a *gharar* transaction.<sup>8</sup>

From these explanations, it can be concluded that a *gharar* transaction can arise for two main reasons. Firstly, there is a lack of information or knowledge on the part of the contracting parties. This leads to a lack of control on the part of the contracting parties. Secondly, due to the absence of an object.

c. According to the Process

Direct investment, which is an investment made without the help of intermediaries. In this case, investors can directly buy the investment portfolio and indirect investment, which is an investment made by using intermediaries or investments made through investment companies.<sup>9</sup>

The investment activities of insurance companies and reinsurance companies as mentioned in the *admitted assets* component consist of:

- a. Time Deposits and Certificates of Deposit
- b. Shares, Bonds, and other securities listed on a stock exchange in Indonesia
- c. Bank Indonesia Certificates (SBI)
- d. Money Market Securities (MBS)
- e. Debt acknowledgement letters with a maturity of more than one year
- f. Direct investment
- g. Buildings or land and buildings for investment purposes
- h. Mortgage loan

- i. Policy loans (specifically for life insurance companies) with the cash value of their policies as collateral

#### **D. Sunlife Syari'ah Insurance Products**

Sunlife Syari'ah Insurance products are divided into two groups, namely traditional (non-investment) and Unitlink (investment). The following is an explanation of traditional Sunlife Syari'ah Insurance Products:

##### **1. Greetings Healthy Grace**

Salam Anugerah Sehat is a health insurance product that provides health and surgical benefits with a large benefit according to the plan chosen, as well as death benefits up to the age of 65 years which only applies to plans with the plus category. The advantages of this product are treatments that are paid according to bills with *cashless* facilities throughout the hospital network and provide comprehensive health protection and as needed up to the age of 100 years.

Unit-linked life insurance products are designed by linking life insurance products with investment instruments. The goal is as an alternative product that provides flexibility for policyholders to directly access their investments. So that unit-linked life insurance can be said to be an innovative and creative product in the life insurance business, because this product provides dual benefits, as protection as well as investment.<sup>10</sup>

Shari'ah unit-linked insurance is a Shari'ah-based unit-linked basic insurance that is managed based on Shari'ah principles, namely the principle of mutual assistance between fellow Participants through the management of contributions in the Tabarru Fund. The following is an explanation of each product:<sup>11</sup>

##### **2. Brilliance Hasanah Sejahtera**

Brilliance Hasanah Sejahtera is a life insurance and investment product with periodic payments to assist customers in achieving future financial needs such as education costs, business capital, worship, children's marriage, old age funds and others managed based on Shariah principles.<sup>12</sup>

##### **3. Brilliance Hasanah Maxima (Shari'ah)**

<sup>10</sup> Pungky Jati Aji Suprabawa. 2010. *Life Insurance (a study of the Implementation of Link Assurance at PT Prudential Life Surakarta)*, (Thesis). Bachelor of Laws Programme in Legal Science at the Faculty of Law, University of Muhammadiyah Surakarta, page 7.

<sup>11</sup> Interview with the Head of Sunlife Syariah Insurance office Mr Safrizal on 28 March 2022.

<sup>12</sup> PT Sunlife Financial Indonesia, *Shari'ah insurance products*, <https://www.sunlife.co.id> accessed on 12 January 2022 at 14:30)

Brilliance Hasanah Sejahtera Maxima Insurance is a combination of insurance and investment product that provides Shari'ah life insurance benefits and investment managed by Shari'ah principles. This product is also equipped with various types of additional insurance benefits (riders) and maximises investment funds through additional benefits in the form of contribution bonuses and loyalty bonuses, along with surplus sharing opportunities.

4. Brilliance Hasanah Fortune Plus (Shari'ah)

Sunlife Financial Indonesia presents Brilliance Hasanah Fortune Plus Insurance, a combination of Shariah-based insurance and investment that provides life insurance benefits with permanent disability and accidental death benefits. This product provides the opportunity for optimal investment returns to help achieve a blessed future for customers and their families.

5. Greetings Grace family

Asuransi salam Anugerah keluarga is an insurance product linked to investment (*unitlink*) that comes as a comprehensive family planning solution and is equipped with insurance benefits for married couples and two children, this insurance product answers the needs of families today.

Insurance Policy, according to POJK No. 23 of 2015 concerning Insurance Products and Marketing of Insurance Products, what is meant by an insurance policy is an insurance agreement deed or other document that is equivalent to an insurance agreement deed agreement, as well as other documents that are an integral part of the insurance agreement, which is made in writing and contains an agreement between the insurance company and the policy holder.<sup>13</sup>

Article 255 of the KUHD states that every insurance must be made in writing in a deed called a policy. From this statement, it can be concluded that an insurance policy is written evidence or a letter of agreement between the policyholder or insurance participant and the insurance company. Thus, the policy plays an important role in maintaining the consistency of the agreement between the parties and making the parties' agreement legally binding. The insurance policy is included in the type of standard agreement, because in the form of a policy document there is an agreement whose clauses have been designed by the insurance company, while participants or policyholders are only asked to accept or reject the contents of the agreement. In addition, the policy also contains standard clauses that will harm participants, so that the provisions of these clauses are regulated by OJK.

---

<sup>13</sup> POJK No. 23 of 2015 concerning Insurance Products and Marketing of Insurance Products, Article 1 paragraph 6.

The policy also has several benefits including, as proof of guarantee for cash compensation to be given by the insurance company and also as proof of payment of contributions or premiums from participants to the insurance company. The insurance policy contains the following things: policy number, name and address of the insured, description of risk, description of investment management, amount of coverage, period of coverage, amount of contribution, stamp duty, guaranteed hazards, and various other provisions in accordance with the agreement of the parties.<sup>14</sup>

#### **E. Implementation of Investment in Sunlife Shari'ah Insurance**

The nature of Islamic insurance is mutual responsibility, mutual cooperation or mutual assistance and mutual protection of each other's suffering. The National Shari'ah Council Fatwa No. 21/DSN-MUI/X/2001 concerning General Guidelines for Shari'ah Insurance states that what is meant by Shari'ah insurance (*ta'min, takful or tadhamun*) is an effort to protect and help each other among a number of people or parties through investment in the form of *tabarru'* fund assets that provide a pattern of return to face certain risks through contracts (agreements) in accordance with Shari'ah. Therefore, insurance is permissible according to Shari'ah, because the basic principles of Shari'ah invite every thing that results in the bonding of fellow human beings and to something that alleviates their disasters.

Initially, customers who want to invest must take insurance products first. Products are everything that is offered to the public to be seen, held, purchased or consumed. Products can be

consists of *product variety, quality, design, features, brand name, packaging, sizes, services, warranties, and returns*. Starting with the product or service offered is very important as the beginning of the marketing process. Thus, marketers can answer the question of what to market. Customers usually face a large number of products and services that may satisfy certain needs. The customer forms expectations about the value and satisfaction that various market offerings will provide and buys based on his expectations that the customer will be directed back or with the term *prospect* by the insurance agent. Then the agent will explain about Pricing. Price is the amount of money consumers pay to buy a product. Prices include *last price, discount, allowance, payment period, credit terms, and retail price*. Through pricing, agents can market their products according to a predetermined price. Investments will be channelled in the Shariah capital market. The capital market is a complement in the financial sector to the

---

<sup>14</sup> Martono, *Banks & Other Financial Institutions* (Yogyakarta: EKONISIA, 2010), pp. 150 151.

other two institutions, namely banks and financing institutions. The capital market provides its services, namely bridging the relationship between the owner of capital (Investor) and the borrower of funds (Issuer).<sup>15</sup> As explained above, the capital market is a facility to bridge capital owners with fund borrowers because not all economic activities are able to fulfil their investment needs from their own savings.

In investment fund products, every periodic contribution paid by participants called premiums is partly a *tabarru'* fund, partly allocated for investment. Among them, each product has a different flow of investment funds. The following is a table of the distribution of funds allocated to investment:<sup>16</sup>

No.	Insurance Products	Year One	Year Two	Year Three	Year Four	Year Five
1	Brilliance Hasanah Sejahtera	20%	45%	65%	85%	95%
2	Brilliance Hasanah Maxima	50%	60%	70%	85%	100%
3	Brilliance Hasanah Fortune Plus	60%	90%	95%	-	-
4	Greetings Grace family	65%	45%	55%	70%	80%

The table above explains that each investment fund allocated is different in each year. In the fifth year the investment is getting bigger percentages. According to the results of interviews with one of Mr Boy's customers, he bought Brilliance Hasanah Sejahtera products with a premium of Rp.6,000,000 per year. The funds allocated to investment were 20% in the first year, and 80% became *tabarru'* funds. However, investment funds will increase each year. Mr Boy also explained that the funds invested can be seen directly through the *My Sunlife* application every ups and downs of investment patterns in Sunlife Syariah Insurance.<sup>17</sup> Shari'ah insurance participants are the owners of the funds and the company is the manager of the funds.

<sup>15</sup> Panji Anoraga & Piji Pakarti, *Introduction to Capital Markets*, Rineka Cipta, Jakarta, 2008, p. 5.

<sup>16</sup> Interview with the Head of Sunlife Syariah Insurance office Mr Safrizal on 28 March 2022.

<sup>17</sup> Interview with one of the Sunlife Syari'ah Insurance Customers Mr Boy on 01 June 2022

Investment Management in Sunlife Syari'ah Insurance will be managed by the *Fund Manager*. All matters regarding the contract are stated in the Policy. The customer can choose where the funds are invested but only in the Sharia capital market section. The customer also gets education by the insurance company if the stock is declining and does not get a profit.<sup>18</sup> Investment funds can only be disbursed after the customer has paid off the payment. Only one product has an investment period of 3 years, namely Brilliance Hasanah Fortune Plus, other products have a minimum of 5 years. So if the customer defaults, the funds will be forfeited and cannot be disbursed.

#### **F. Fiqh Muamalah review of investment implementation in Sunlife Insurance company**

Investment is a form of activity that begins through observation, research, data collection and business planning in the form of capital investment or asset placement. Capital or assets used can be in the form of assets and / or funds, for sectors of activity that are calculated very carefully with the aim of providing income and increasing its value in the future.<sup>19</sup>

Investment is one of the Islamic teachings and concepts that fulfills the process of tadrij and trichotomy of knowledge. It can be proven that the concept of investment in addition to being knowledge is also spiritual because it uses Islamic norms, as well as the essence of a science and charity, therefore investment is highly recommended for every Muslim.<sup>20</sup>

In fact, the principle and foundation of Shari'ah investment that needs to be considered by Shari'ah insurance business actors is the principle that the company as a trustee (*mudharib*) entrusted by the owner of the funds (*shahibul maal*) must carry out investment activities after obtaining Shari'ah approval from the Shari'ah Supervisory Board of funds that have been successfully collected from participant premiums. where the investment made must be in accordance with Shari'ah law based on Surah al-Baqarah verse 275, An-Nisa verse 29, al-Maidah verse 1 and the hadith of the Prophet Muhammad SAW narrated by Tirmizi from Amr bin Auf and Ibn Maaja from Ubadah bin Shamit from Yahya.<sup>21</sup>

##### **1. Qur'an**

<sup>21</sup> Abdullah Amrin. 2011. *Achieving Blessings Through Shari'ah Insurance in Comparison with Conventional Insurance*. Jakarta: PT Elex Media Komputindo, p 203.

الَّذِينَ يَأْكُلُونَ الرِّبَا لَا يُؤْمِنُونَ إِلَّا كَمَا يُؤْمِنُ الْذِي يَتَخَطَّهُ الشَّيْطَنُ مِنَ الْمُنْسَكِ ذَلِكَ بِأَنَّهُمْ قَالُوا أَنَّمَا الْبَيْعَ مِثْلُ الرِّبَا وَأَحَلَّ اللَّهُ الْبَيْعَ وَحَرَمَ الرِّبَا فَمَنْ جَاءَهُ مُؤْعِظَةٌ مِنْ رَبِّهِ فَنَّهَى فَلَمَّا مَا سَلَّفَ وَأَمْرَهُ إِلَى اللَّهِ وَمَنْ عَادَ فَأُولَئِكَ أَصْحَبُ النَّارِ هُمْ فِيهَا خَلُوْنَ

Meaning: Those who eat (take) usury cannot stand but as one possessed by a demon because of insanity. That is because they say that buying and selling is the same as usury, whereas Allah has made buying and selling lawful and usury unlawful. And as for those to whom the prohibition of their Lord has come, and they have ceased (from usury), then to them belongs what they had taken (before the prohibition came); and their affair is (up to) Allah. But whoever returns (to usury), those are the inhabitants of hell; they shall abide therein. (QS. Al-Baqarah: 275).

يَا أَيُّهَا الَّذِينَ آمَنُوا لَا تَأْكُلُوا أَمْوَالَكُمْ بَيْنَكُمْ بِالْبَاطِلِ إِلَّا أَنْ تَكُونَ تِجَارَةً عَنْ تَرَاضٍ مِنْكُمْ وَلَا تَقْتُلُوا أَنفُسَكُمْ إِنَّ اللَّهَ كَانَ بِكُمْ رَحِيمًا

Meaning: O you who believe, do not eat of one another's wealth by unlawful means, except by way of a mutually agreeable trade between you, and do not kill yourselves; surely Allah is Most Merciful to you (QS. an-Nisa: 29).

يَا أَيُّهَا الَّذِينَ آمَنُوا أَوْفُوا بِالْعَهْدِ إِذْ أَلْتَ لَكُمْ بَهِمَةً الْأَنْعَامِ إِلَّا مَا يُئْتَى عَلَيْكُمْ غَيْرُ مُحْلَّ الصَّيْدِ وَأَنْتُمْ حُرُمٌ إِنَّ اللَّهَ يَحْكُمُ مَا يُرِيدُ وَأَنَّمَا حُرُمٌ

This means: O you who believe, fulfil those contracts. Forbidden to you are cattle, except those of which you shall be recited, but not hunting while you are performing the pilgrimage. Verily, Allah establishes laws as He pleases. (QS. al-Maidah: 1).

Many authentic Qur'anic and Hadith texts instruct Muslims to base their actions on righteousness, for its own sake. That foundation is sincerity in the service of Allah. All means and ends are aligned with that foundation.

Indeed, all human activities, the basis on which a person invests his funds should be as worship to seek the pleasure of Allah SWT. A Muslim's awareness that life in this world is a provision for the next life, will fence him off from actions that will harm his long-term goals. Business ethics is not just a social norm, but a standard of behaviour that will be accounted for in the hereafter.

As stated earlier that the laws of muamalah are open-ended, meaning that Allah Swt in the Qur'an only provides rules that are outline only. The rest is open to the mujtahid to develop it through his thinking as long as it does not conflict with the Qur'an and Hadith. The Qur'an and

Hadith do not mention exactly what and how to insure, but that does not mean that insurance is forbidden because it turns out that Islamic law contains the substance of insurance in an Islamic manner.<sup>22</sup>

The nature of Islamic insurance is mutual responsibility, mutual cooperation or mutual assistance and mutual protection of each other's suffering. The National Shari'ah Council Fatwa No. 21/DSN-MUI/X/2001 concerning General Guidelines for Shari'ah Insurance states that what is meant by Shari'ah insurance (*ta'min, takful or tadhamun*) is an effort to protect and help each other among a number of people or parties through investment in the form of *tabarru'* fund assets that provide a pattern of return to face certain risks through contracts (agreements) in accordance with Shari'ah.<sup>23</sup>

Therefore, insurance is permissible in Sharia, because the basic principles of Sharia call for anything that results in the bonding of fellow human beings and for something that alleviates their disasters as Allah says in the Qur'an surah Al-Maidah verse 2:

وَتَعَاوَنُوا عَلَى الْإِرْٰٰمِ وَالنَّقْوَىٰ وَلَا تَعَاوَنُوا عَلَى الْأَثْمِ وَالْعَدْوَانِ وَأَنْفَوْا اللَّهُ أَعْلَمُ بِمَا يَعْمَلُونَ اللَّهُ شَدِيدُ الْعِقَادِ

Meaning: And help each other in (doing) righteousness and piety, and do not help each other in sin and transgression. And fear Allah, surely Allah is very severe in His punishment.

Shari'ah insurance also leads to the establishment of a society that stands on the principle of mutual assistance and mutual support because every Muslim to another Muslim is like a building that strengthens one part of it to another. This insurance does not have the act of eating people's wealth unlawfully, because what is given is merely alms from the results of the property collected. In addition, the existence of Sharia insurance will bring progress and prosperity to the economy of the people.

## Conclusion

Based on the results of the research and discussion above, the authors conclude as follows:

1. Today's Shariah Insurance products are already very diverse than some Shariah insurance products circulating in general. Shariah

<sup>22</sup> Gemala Dewi. 2017. *Aspects of Shari'ah Banking & Insurance in Indonesia (Third Edition)*. Depok: Prenada Media Group, pp 145-146.

<sup>23</sup> Bahrul Ulum. 2015. Comparison of Unit Link Life Insurance of PT Prudential between Conventional and Shariah, (Thesis). Bachelor's Degree Programme in Islamic Law, Faculty of Shari'ah, Maulana Malik Ibrahim State Islamic University, Malang, p. 25.

insurance is an effort to help and protect each other among participants whose operational implementation and legal principles are in accordance with Islamic law. Without intending to precede fate, insurance can be intended as a preparatory effort to face the possibility of risk. Sunlife Syariah Insurance Banda Aceh has 2 types of products, namely traditional (non-investment) and *Unitlink* (investment). Traditional products are Salam Anugerah Sehat and *Unitlink* products consist of Brilliance Hasanah Sejahtera, Brilliance Hasanah Maxima, Brilliance Hasanah Fortune Plus and Salam Anugerah Sehat. There are 4 types of contracts in Sharia insurance, namely *tabarru'* contracts, *tijarah* contracts, *wakalah bil Ujrah* contracts, and *mudharabah musytarakah* contracts.

2. Initially, customers who want to invest must take insurance products first. Customers will be directed back or with the term *prospects* by insurance agents. The agent will introduce all forms of product products, monthly payments and risks in the policy. Investment will be channelled in the capital market. The capital market is a complement in the financial sector to the other two institutions, namely banks and financing institutions. The capital market provides its services, namely bridging the relationship between the owner of capital (Investor) and the borrower of funds (Issuer).
